

I liked the way this professional development opportunity was structured. I really enjoyed the opportunity to choose the sessions and was appreciative that we were allowed time to work. Nice Job!

Sorry, I should have met with Kristen R. before being in her room to make sure I knew how to get the sound working (checked with her on the hook-up).

Any additional "tutorial" sessions for Mac applications. The ones provided today were excellent, but there was not nearly enough time.

I really appreciated the sessions that were offered today with things I could use in my classroom.

Excellent inservice! I love hearing from staff in our district- we have such talented people in our buildings!!! Let's do more like this :)

One to One teaching, Classroom management with computers, iWeb

Poll staff prior to in-service, lengthen the sessions so more time can be spent implementing and working on chosen topic.

The time to work and find new sites was very useful. Team time was also valuable.

Continue to use our own staff for professional development!! Much more relevant and practical!!

Great Inservice! Thank you!

I enjoyed the sessions and had time to work on my own projects and network with fellow staff as well.

Kudos to the Professional Development Team and all who presented.

More of the same - led by our own teachers. I'm sure there are many great things going on in our classrooms that teachers don't even consider worthy of teaching to others - but we're usually amazed at what others are doing. Maybe it could be some kind of a rotation.

I think that everyone should have to see the Raising Cain video. It was wonderful and there were so many things to take away from! Loved it.

Very helpful! Having technology related sessions is very useful. Sometimes we have had training, but no time to practice it so I forget.

We found out this morning that we can scan from our copier and send it directly to our email. Saves paper! I haven't tried it yet, but I'm anxious to do so and do a book on my computer. I'll also be able to scan some worksheets that I use for instruction and project them on the board rather than run them off. I also like the idea that our own colleagues presented. Great way to share our expertise. Also, we then have a "go to" person to clarify anything we are unsure of. Also, I loved having the opportunity to hear from Board members. It's nice to know more about them. Thanks.

Very good job!

This was one of the best and useful in-service! The topics could even be repeated for another year. I wouldn't even mind more time to work with the ideas I did receive. I like the work time --a little more time would be nice. Thank you for a job well done! I enjoyed and found the day beneficial.

"work time" to complete lessons for newly learned skills and discussions. It was nice to get the information, but it would have been even better if we had more time to work with the ideas we learned as well.

Never enough time to cover things -- the advance wikii and strobels could have been the whole day

Another in-service like this one would be very good-just with some new topics using technology.

The Advanced Wiki session didn't provide as many new tools and gadgets as I had hoped, so next time there could maybe be more provided.

Strategies to motivate unmotivated youth.

Regular ed classroom interventions for youth that are failing several classes, yet not likely to qualify for SPED.

Encouragement and positive discipline.

I thought it was great - I got work time in one session and that was great. There were so many topics that I wanted to attend but not enough time - would be nice to have printouts from those sessions so I could read about them!

Really enjoy the sessions I attended and found them all very worthwhile. Thanks.

Please have at least one in-service each year like the one we just had. Fellow teachers have wonderful, relevant info to share.

Very good sessions!! SO many choices, not enough time.

Like the the work times. It seemed like we learned about lots of new things but didn't have enough time to work on those things.

The collaborative atmosphere of guided work-time, similar to what we know works with our students, was the most productive use of in-service time! Thanks!

I really appreciated the time where we could work on some of the things we learned.

I enjoyed the sessions.

I appreciate that there was time to work on newly learned skills - although I really needed more "play" time to work through some of the things I learned.

Some of the sessions I went away with "unfinished" projects. But that is probably just me being a slow learner with technology, but I did appreciate the time that we had - it just maybe could have been a little longer.

Thanks!

I enjoyed the Raising Cain video because it gave us some insight into students, especially with all of the bullying issues, etc. instead of solely focusing on technology projects. I would suggest more information along those lines.

It is so good to just be able to talk to other teachers. That time is always valuable!

Gizmo exploration.

Web-site explorations.

I liked the sessions where we could take time to work on different things we need to do but never have time to work on...ex: organizing files, cleaning out files on our computers. VERY GOOD!
